

Data card

One page. Fill in every section below for your project dataset. Submit a version at M2 and an updated version at the end if anything changed after cleaning or during the mining step.

Pair names: Source (from the curated list): Registered scope (as declared at M0):

Source

Which curated source did you use, and which specific endpoint(s)?

Collection method & dates

How was the data acquired (script/library, pagination approach), and over what date range was it collected?

Scope & size

What is the registered scope in practice — how many records, what entities/time window/filters — and how does it match what you registered at M0?

Schema

What are the fields/columns, their types, and what do they mean? (A short table or list is fine.)

Known biases & limitations

What is missing or over/under-represented in this data, and what does that imply for any conclusions drawn from it?

License / ToS

Under what license or terms of service is this data made available, and what does that permit or restrict for this project?

GDPR note

Does this dataset contain personal data (e.g. usernames, comments, identifiable individuals)? If so, what was minimized/excluded, and why is the remaining collection justified? If not, state explicitly why the data is not personal data under GDPR.
